3. Market Developments in Third-Quarter 2024

Equity Markets

Investors went into the third quarter waiting for the all-clear sign on inflation, which would let the Fed finally cut interest rates. The economic data quickly turned in that direction, with soft readings on employment and inflation data suggesting price pressures were at last meaningfully abating. In the US, stocks rebounded from an August swoon, but leadership shifted from big tech and growth stocks to value names and smaller stocks.

Most equity markets across Asia registered noteworthy ascents in Q3. China stocks also excelled following a series of government economic stimuli designed to counter the broader economic slowdown. Taiwanese stocks experienced a downturn affected by the tech slump, specifically AI stocks, but despite this setback, they remain as one of the best performing indexes this year.

Globally, the standout performer was the Hang Seng HSI PR HKD, leading with an impressive 19.27% increase, directly followed by the PSEI Index PR PHP with 13.42%. Close behind these market leaders was the PSE All Share Index PR PHP, boasting a 12.39% growth, and the SSE Composite PR CNY with a 12.44% hike.

However, not all indexes saw positive growth in Q3. The KOSPI PR KRW emerged as the worst performer, dipping by 7.31%, while the Nikkei 225 Average PR JPY tailed behind with a 4.20% drop. Other poor performers included the FTSE 100 PR GBP with a meager 0.89% growth and the Euronext Paris CAC 40 PR EUR, which only grew by 2.09%.

The DJ Industrial Average PR USD also showed strong growth with an 8.21% increase, while the NASDAQ Composite PR USD demonstrated a more moderate rise with a lukewarm 2.57% hike, trailing its counterparts in Asia.

In conclusion, Q3 2024 has been a mixed bag in terms of market index performance. The Hang Seng HSI PR HKD, PSEI Index PR PHP, PSE All Share Index PR PHP, and SSE Composite PR CNY provided impressive returns, with the Nikkei 225 Average PR JPY unable to arrest its decline which started in Q2 this year.

Bond Markets

Bond markets continued to rally in the third quarter as the outlook for interest rates and the chances of a soft landing for the economy solidified. Yields on the 10-year Treasury note fell from 4.48% at the beginning of July to 3.75% by the end of the quarter. Investors enjoyed some price appreciation as yields fell. The [Morningstar US Core Bond Index](#) gained 5.15% for the quarter and is now up 11.39% over the past 12 months. Investors found the most return in long-term core bonds and Treasury bonds.

Strategists expect shorter-term bond yields to keep falling as the Fed cuts interest rates, but they don't see as much upside for longer-term ones, since expectations for a soft landing are largely priced into bond markets.

The beginning of a Fed easing cycle also normalized the yield curve—a graphical representation of bond yields across different maturities. After more than two years of inversion (wherein short-term yields were higher than long-term yields), yields on short-term bonds fell below those on long-term bonds in early September. This is how yields generally behave, and the upward-sloping curve reflects the extra income that investors demand in exchange for locking up their money with the government.

Against that backdrop, strategists [encourage](#) investors to move out of cash and shorter-dated bonds to capture higher yields on intermediate-dated products—those with maturities roughly between three and seven years. They're also warning of the potential for an uptick in volatility in very long-dated bonds, which are sensitive to changes in economic expectations.

The Outlook

Moving into the final quarter of 2024, a few key things are expected to weigh heavily on investors’ minds. The upcoming U.S. Presidential Election in November and China’s ever-evolving attempts to jumpstart economic growth will play a key role in shaping investor sentiment in Q4 and well into 2025. From a market perspective, it has been a bumpy third quarter. The quarter began with a long-awaited rotation out of big-cap growth and AI stocks and into value and smaller company names in the U.S. stock market. Then came a brutal selloff in August, with Japan and India continuing to fall out of favour with investors.

As we look towards the next round of rate cuts by the Federal Reserve, the European Central Bank and the Bank of England, others have been more reticent – with Japan, India and Australia being noteworthy for preaching a more measured approach to monetary policy. Clearly, the fate of the world’s major economies is expected to take divergent paths, and this will present further challenges for investors looking to position their portfolios over the next few months.

As of Sept. 23, the US market was trading at 1.03 on a price/fair value metric, meaning that the market was trading at a 3% premium over composite of Morningstar’s fair values, compared to what other strategists often say with regards to the market being 8% to 10% undervalued. In Asia, equity gains were still largely led by the financial services and utilities sectors for the year to Sept. 23 if we exclude market reaction to the positive moves by the Federal Reserve and the People’s Bank of China to loosen monetary policy made in the last 10 days of September. The latter is a beneficiary of interest-rate cuts alongside anticipated higher demand for power for artificial intelligence and cloud needs. And while banks are normally sensitive to lower interest rates leading to a fall in net interest margin, banks appear to have managed their capital costs, leading to a more benign margin outlook. Insurers are also benefiting from repricing.

With the twin loosening moves, we expect investors to start increasing their appetites for more cyclical sectors and beneficiaries of lower funding costs in Asia. So, we could start to see strengthening performances in sectors that have lagged—namely, the consumer cyclical, healthcare, and real estate sectors. We also anticipate dividend yield plays to continue to benefit, with more room for REITs to move higher.

However, China markets are no longer cheap as of October 15. In the first two weeks of October, Morningstar's China coverage universe has moved from a discount of 21% to our fair value estimate to just 4% now. As China had been underweight by most, the impact of the buying has led to huge price moves given limited selling. At this stage we do believe some companies have more than factored in any potential positives. If there is a lack of sustained policy support or positive market sentiment, it is likely that we could see some steep retracements.

Regarding fixed income, their performance through Sept. 23 was relatively well. The US Core Bond Index was up 4.7%. The Core Bond Index is Morningstar's proxy for the broad overall bond market. Within that, things like corporate bonds and high-yield bonds have also done relatively well thus far this year. A lot of that was because the US Treasury had tightened 14 basis points through the 23rd to 3.74. However, since the Fed cut by 50bps, we have seen a backup in long-term yields, with the 10-year now slightly over 4%. Based on our outlook with the US Treasury going down to that 3% level by 2027, we continue to look to say more overweight, long duration bonds, and it is worth locking in those rates while one can still do so.

4. Summary: Performance of CPFIS-Included Funds

Exhibit 9 Average Return of CPFIS-Included Funds at End of 3Q 2024 (% in SGD)

Average Returns	For the period ended Sep. 30, 2024 (% in SGD)			
	3 months	1 Year	3 Years (Cumulative)	3 Years (Annualized)
All CPFIS-Included Funds	2.54	14.71	0.43	(0.13)
Unit Trusts Only	3.14	15.29	2.03	0.25
ILPs Only	2.14	14.33	(0.52)	(0.36)

Source: Morningstar Direct.

Exhibit 10 Average Performance of CPFIS-Included Funds at End of 3Q 2024 (% in SGD)

Source: Morningstar Direct.

While the overall performance of CPFIS-included funds fell to 2.54% in the third quarter when compared with last quarter's 3.11%, the performance of unit trusts increased to 3.14%. Proxied by MSCI World Index, global equities saw a marginal increase of 0.62%. MSCI AC Asia ex Japan also posted gains of 4.43%, while bond returns – the FTSE WGBI reversed its decline to deliver a positive return of 1.17%.

Over a one-year period, all CPFIS-included funds delivered 14.71% for investors, a notable improvement when compared to the same period up to last quarter which was 9.69%. The MSCI World Index grew by 24.38%, with the FTSE WGBI continuing to reduce its losses by posting a negative return of 0.17%. On a three-year cumulative basis, the scheme also saw a slight improvement with a return of 0.43%. Apart from this, the performance of all funds showed growth, with the greatest improvement shown by unit trusts, which posted gains of 2.03% when compared to -1.07% the last quarter.

Exhibit 11 Average Performance of CPFIS-Included Funds at End of 3Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

The positive momentum from the previous quarter carried over to the third quarter, with all asset classes posting gains. The most significant improvement was found in fixed income, where gains of 3.55% were substantially higher than the previous quarter's return of 0.03%. All other asset classes remained fairly stable, with the exception of equity funds falling to 2.46% from last quarter's return of 4.10%.

Over a one-year horizon, the profile of investor returns remained broadly unchanged. Equity funds extended their lead by growing their returns to 16.97% from 11.91% in the previous quarter, while allocation and fixed-income funds also showing a similar positive trajectory, with positive returns of 13.61% and 7.92% respectively. Over the same period, money market funds were stable, with an average positive return of 3.69%.

Over a three-year reporting interval, the performance of all asset classes did not deviate much from last quarter's report, with all of them reporting improved gains. The best performing asset class (from a net gains perspective) was fixed income, which posted a negative return of 2.60%, a marked improvement from -6.00%. Investors' preference for stability was also reflected in money market funds delivering a return of 8.02%, which outperformed all other asset classes. Equities reversed its losses and posted returns of 1.23%, with allocation funds close to hitting a 0% loss rate.

Exhibit 12 Average Performance of CPFIS-Included Unit Trusts at End of 3Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

Spotlighting the top and worst performers over the last three months in our Morningstar Category, there were some interesting changes in terms of the performance of the funds monitored for CPFIS-Included Unit Trusts. The three fund categories that have recorded the highest growth are EAA Fund Thailand Equity with a stellar growth of 15.50% - in the second quarter they posted a negative return of 10.53%. This was followed by EAA Fund China Equity (13.69%) where its strong performance was not surprising given the raft of stimulus measures which triggered a stock market rally, with Fund ASEAN Equity following close behind with returns of 12.10%.

On the flip side, the EAA Fund Islamic Global Equity experienced the largest drop with a rate of -4.68%. Close to its heels was EAA Fund US Large-Cap Value Equity, which saw a decline of -3.20%. The EAA Fund Sector Equity Healthcare also showed a negative trend, with a negative return of 2.68%.

Over the course of 12 months, there were some changes in the top three performing categories. While EAA Fund US Large-Cap Growth Equity (32.75%) continued to maintain its dominance, EAA Fund Sector Equity Biotechnology rose up one rank to knock India equity out of the top 3 with returns of 27.18% with EAA Fund US Large-Cap Blend Equity taking the final position with returns of 27.13%. There was no change in the top 3 worst performing funds, but EAA Fund China Equity - A Shares finally delivered gains of 3.03%, with EAA Fund China Equity doing the same with a return of 4.80%. EAA Fund Thailand Equity was the only category to post a negative return of 4.46%, but this was a marked improvement where the previous quarter saw a loss of 19.49%.

In a three-year reporting window (cumulative basis), there was no change in the top performing category, EAA Fund US Large-Cap Blend Equity led the pack with a return of 29.77%. India continued to fall out of favour in global markets, dropping out of the top 3, with EAA Fund Global Equity Income and the EAA Fund Singapore Equity delivering returns of 25.87% and 24.71% respectively. While categories like the EAA Fund China Equity - A Shares and the EAA Fund China Equity continued to post negative returns, the loss was significantly less when compared to the second quarter of 2024. All bond categories presented a negative return.

Exhibit 13 Average Performance of CPFIS-Included ILPs at end of 3Q 2024 by Asset Class (% in SGD)

Source: Morningstar Direct.

In the ILP universe, more losses were recorded when compared to the second quarter. Similar to its unit trust counterpart, India no longer featured in the top 3, with EAA Insurance China Equity placing first with a return of 12.58%, followed by, EAA Insurance Property - Indirect Global (9.87%) and EAA Insurance Global Equity Income (6.70%) – a totally new top 3 composition. On the other hand, the three worst performing categories were EAA Insurance Sector Equity Technology, EAA Insurance Islamic Global Equity, and EAA Insurance Islamic Equity - Other. The technology sector posted a negative return of 5.80%, likely attributed to market fluctuations and uncertainties in the tech industry. The Islamic Global Equity and Islamic Equity - Other sectors also had negative returns of 4.61% and 3.94% respectively. All bonds also showed improvement with all delivering positive returns – with EAA Insurance SGD bonds the best performing one with a return of 4.05%. The performance of allocation ILPs was mixed, with EAA Insurance USD Aggressive Allocation and EAA Insurance USD Moderate Allocation posting smaller returns as compared to EAA Insurance Asia Allocation.

Over a 12-month period, there was no change in the top 2 best performing ILP categories - EAA Insurance Sector Equity Technology, EAA Insurance India Equity delivered returns of 34.44% and 28.33% respectively, with EAA Insurance Global Equity Income pushing EAA Global Large-Cap Growth Equity out of the top 3 with a return of 22.94%. While there were no negative returns, EAA Insurance Money Market - Other, EAA Insurance Global Bond - EUR Biased, and EAA Insurance Asia Bond funds were the worst performing ILPs with gains of only 3.69%, 6.07%, and 6.12% respectively. All other ILP categories also witnessed better performance as compared to the second quarter.

For the three-year period, India equity dominated the list of best performing ILPs, with a positive return of 22.66%. China-related ILPs continued their streak as the worst performing ILPs, followed with Asia ex-Japan equity and global emerging markets equity following with 22.22% and 23.68% respectively. Global bond ILPs also did not fare very well either, although Asia bonds registered a return of 0.12%.

Over a 3-year period, the best performing ILP categories were EAA Insurance Global Equity Income, EAA Insurance Singapore Equity, and EAA Insurance Europe Flex-Cap Equity, with returns of 22.30%, 21.92%, and 17.12% respectively (culminative). Again, EAA India Equity (9.24%) was nowhere to be found having featured so prominently as a top performer in the first two quarters of 2024. While most bond ILP categories delivered negative returns except for EAA Insurance SGD Bond (2.20%), their losses were reduced when compared to the second quarter of 2024.

5. Summary of Performance

The Morningstar Rating is based on funds' risk-adjusted returns within its Morningstar Category peer group. Morningstar gives more weight to downside variation when calculating Morningstar Risk-Adjusted Return because investors are generally risk-averse and dislike downside variation. The Morningstar Rating is calculated within each Morningstar Category peer group because the relative star ratings of two funds should be affected more by manager skill than by market circumstances or events that lie beyond the fund managers' control. The Morningstar Rating is based on MRAR, using Morningstar Risk-Adjusted Return % Rank for funds in a category. Morningstar calculates ratings for the three-, five-, and 10-year periods, and then the overall Morningstar Rating is based on a weighted average of the available time-period ratings.

Exhibit 16 The Weight of Overall Morningstar Rating

The overall Morningstar Rating weight is shown below:

Months of Total Returns	Overall (Weighted) Morningstar Rating
36-59	100% of three-year rating
60-119	60% of five-year rating 40% of three-year rating
120 or more	50% of 10-year rating 30% of five-year rating 20% of three-year rating

Source: Morningstar Direct.

There are certain cases where funds are *ineligible* for a Morningstar Rating. This includes funds that are:

- Categorized in any Other/Miscellaneous category;
- Restricted funds;
- Virtual share classes: Also known as a *convenience* or *currency* class, virtual classes are investments whose performance is quoted in another currency or allow investors to purchase shares in a currency other than its base currency;
- Inception date/performance start date is shorter than 36-month continuous monthly returns available;
- Dormancy history led to shorter than 36-month continuous monthly returns available;
- Obsolete funds;
- Funds whose peer group contains fewer than five distinct portfolios.

Morningstar Rating ("Star Rating")

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5%, it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

Morningstar Return Rating

An annualized measure of a fund's excess return relative to the return of the 90-day Treasury bill over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Return is displayed in decimal format and is calculated only for those investments with at least three years of performance history.

Morningstar Risk Rating

An annualized measure of a fund's downside volatility over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Risk is displayed in decimal format and is calculated only for those investments with at least three years of performance history. A high number indicates higher risk and low numbers indicate lower risk.

Morningstar Fee Level

The Morningstar Fee Level evaluates a mutual fund share class' expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each Comparison Group, a fund share class' expense ratio is ranked against its peers using five quintiles. Each quintile corresponds to one of the following scores:

- Low: Least Expensive quintile
- Below Average: Second Least Expensive quintile
- Average: Middle quintile
- Above Average: Second Most Expensive quintile
- High: Most Expensive quintile

Morningstar Sustainability Rating

Morningstar assigns Sustainability Ratings by ranking all scored funds within a Morningstar Global Category by their Historical Sustainability Scores. The ranked funds are then divided into five groups, based on a normal distribution, and each receives a rating from High to Low. Although a higher rating is better than a lower one, please note that owing to the risk component of the scores, lower scores are better (and lead to higher ratings) than higher scores and indicate that a fund is, on average, invested in fewer companies with a high environmental, social, or governance risk under Sustainalytics' ESG Risk methodology and therefore exposed to less risk driven these aforementioned factors.

Percent Rank Rating Depiction

- Top 10%: High/5 globes
- Next 22.5%: Above Average/4 globes
- Next 35%: Average/3 globes
- Next 22.5%: Below Average/2 globes
- Bottom 10%: Low/1 globe

To receive a Portfolio Sustainability Score, at least 67% of a portfolio's assets under management must have a company ESG Risk Rating. The percentage of assets under management of the covered securities is rescaled to 100% before calculating the Portfolio Sustainability Score.

5.1 Morningstar Ratings for CPFIS-Included Unit Trusts

Full List of CPFIS Included UTs With Morningstar Data

Note: Funds need 36 months of performance history to have a Morningstar Rating, and certain categories are not eligible for rating. For a Sustainability Rating, at least 67% of the portfolio's AUM must have a company ESG Risk Rating.

List A Funds

List A—Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) The expense ratio is not higher than that set by the CPF Board by the respective risk class. The expense ratio criteria also applies to existing funds from Jan. 1, 2008, onward; iii) A 0% sales charge; iv) New funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least three years.

8.1 Data Definitions

Return

Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Unless otherwise noted, Morningstar does not adjust total returns for sales charges (such as front-end loads, deferred loads, and redemption fees), preferring to give a clearer picture of a fund's performance. The total returns do account for management, administrative, and 12b-1 fees, and other costs taken out of fund assets. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as *geometric total returns*), affording a more meaningful picture of fund performance than nonannualized figures.

Annualized Returns

For standard time periods (one, three, five, and 10 years), returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(1/y)} - 1) * 100$$

where,

Cum Ret = the cumulative return

y = the number of years (one, three, five, or 10)

For customized time periods returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(365.25/d)} - 1) * 100$$

where,

Cum Ret = the cumulative return

d = the number of days between the start and end date

Annual Report Net Expense Ratio

The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The expense ratio for fund of funds only includes the wrap or sponsor fees and does not include the underlying fund fees.

Standard Deviation

A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure cannot be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If a fund's returns follow a normal distribution, then approximately 68% of the time they will fall within one standard deviation of the mean return for the fund and 95% of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate period. All of the monthly standard deviations are then annualized.

Sharpe Ratio

A risk-adjusted measure developed by Nobel laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a fund that is an investor's sole holding. The Sharpe ratio can be used to compare two funds directly on how much risk a fund had to bear to earn excess return over the risk-free rate.

The Sharpe ratio can be calculated one of three ways:

1. Standard Sharpe ratio (SharpeRatio_M)
2. Arithmetic Sharpe ratio (SharpeRatio_A)
3. Geometric Sharpe ratio (SharpeRatio_G)

$$\text{Sharpe Ratio}_M = \frac{\left(\frac{\sum_{i=1}^n R_i}{n} \right) - \left(\frac{\sum_{i=1}^n RF_i}{n} \right)}{\text{St Dev}_M}$$

$$\text{Sharpe Ratio}_A = \frac{\left[\prod_{i=1}^n (1+R_i) \right]^{\frac{m}{n}} - \left[\prod_{i=1}^n (1+RF_i) \right]^{\frac{m}{n}}}{\text{St Dev}_A}$$

$$\text{Sharpe Ratio}_G = \frac{\left[\prod_{i=1}^n (1+R_i) \right]^{\frac{m}{n}} / \left[\prod_{i=1}^n (1+RF_i) \right]^{\frac{m}{n}} - 1}{\text{St Dev}_A}$$

where,

$$\text{St Dev}_M = \sqrt{\frac{1}{n-1} \cdot \sum_{i=1}^n (R_i - \bar{R})^2}$$

$$\text{St Dev}_A = \text{St Dev}_M \cdot \sqrt{m}$$

and

St Dev_A = Annualized Standard Deviation

St Dev_M = Standard deviation

R_i = Return of the investment in time period i

RF_i = Return of the risk-free investment in time period i

m = Number of time periods in a year

n = Total number of time periods

\bar{R} = Average return of the investment over the time period

Information Ratio

Information ratio is a risk-adjusted performance measure. The information ratio is a special version of the Sharpe ratio in that the benchmark doesn't have to be the risk-free rate. The Israelson method is an adjustment of the information ratio to take into account the inconsistency of the IR when excess returns are negative.

$$Ratio_{\text{Israelsen}} = \frac{ER}{Risk \cdot \frac{ER}{abs(ER)}} = \begin{cases} \frac{ER}{Risk} & \text{if } ER \geq 0 \\ ER \cdot Risk & \text{if } ER < 0 \end{cases}$$

Max Gain

The peak-to-trough incline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.

Max Drawdown

The peak-to-trough decline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.
